

SYSTEM LIGHTING

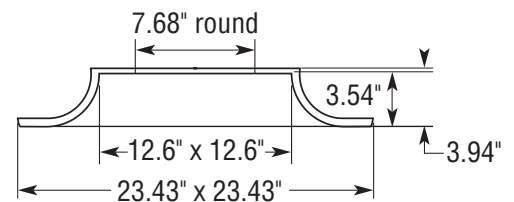

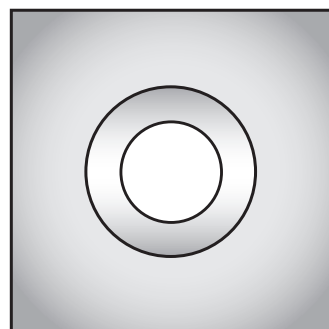

ARCHITECTURAL ELEMENTS

System Lighting is a collection of architectural elements that seamlessly integrate our recessed downlights into a variety of ceilings. Pre-fabricated gypsum modules add a coffered feature to a typically flat ceiling. A single recessed downlight is showcased in the center. Installation is simple and fast! Contours are smooth and rounded and the finished look is seamless and flush with surrounding ceiling material.

Two models are offered. ARC24SQ features a square coffer and ARC24R is round. They are ideally suited for use with 1/2" thick sheet rock ceilings and feature a center opening that can be engineered to accommodate a variety of downlight apertures.

ARC24SQ1
23.43" x 23.43" x 3.94" H

ARC24R1
23.43" x 23.43" x 3.94" H
